

SURGICAL INFORMATION PACKET

Dear Client,

Your pet has been scheduled for an upcoming surgery in the near future. In our attempt to assist clients, we have put together this packet to make surgery day as easy and stress-free as possible.

We also strive to provide a fear free environment for your pet. Once your pet is scheduled for surgery, we will obtain pre-anesthetic bloodwork and will send home fear free medications. You will give these the night prior and morning of their procedure to help alleviate stress and the need for additional anesthetic requirements.

You will find that the following information has been enclosed:

1. **Surgical Consent form** (Initial and bring in Day of Surgery)

Please read carefully all the enclosed information. If you have any questions, please feel free to call us. On your pet's surgery day, we require you to review and sign an **Authorization/Estimate Form**— which allows you to review services. This form is not included in the packet and will be provided to you at our office prior to admitting your pet for services.

The night before your pet's surgery...

- Withhold all food and treats after 12:00am.
- Water may be left down after this time period.
- If you are currently administering any medications, vitamins and/or injections, withhold the morning doses unless otherwise instructed by the doctor.

Please make arrangements for your pet to be dropped off on the morning of scheduled surgery, unless other arrangements have been made in advance. At time of drop off, our team will be happy to answer any questions/concerns and collect the enclosed/completed **surgical consent and authorization/estimate forms**.

Our veterinary nurse will escort your pet to the surgical prepping area to wait for their surgery. If any questions arise, the doctor may contact you at the number on the **Authorization Form** you will complete the morning of surgery.

You are welcome to check up on your pet's status, however, we request that you allow plenty of time for your pet's procedure to be done. At this time, we will be able to give you an idea when your pet may be discharged. When you arrive to take your pet home, the receptionist will bill you out and the veterinary nurse will go over all discharge orders verbally and give you a written copy. If you do not understand any instructions, please do not hesitate to ask them to go over them one more time.

We hope surgery day will be a pleasant experience. Remember, our team knows surgery can be an anxious time and we are always available to answer any and all questions concerning the upcoming procedure.

We look forward to serving you and your pet on the upcoming surgery day and years to come.

PRE-ANESTHETIC BLOOD TESTING INFORMATION FORM

PLEASE READ CAREFULLY.

Our greatest concern is the well-being of your pet. Before putting your pet under anesthesia, we routinely perform a full physical examination.

We also require that a Pre-Anesthetic Blood Profile be performed on all pets' undergoing anesthesia to maximize patient safety. This is typically performed the week prior to your pet's procedure along with sending home fear free medications to help alleviate stress during their visit.

The **Pre-Anesthetic Blood Profile** helps alert our surgeon to the presence of dehydration, anemia, infection, diabetes and/or kidney or liver disease that could complicate the procedure. These conditions may not be detected without a pre-anesthetic profile thus not allowing for the most appropriate and safest anesthetic regime to be administered. These tests are similar to those your own physician would run if you were to undergo anesthesia. In addition, these tests may be useful if your pet's health changes to develop faster, more accurate diagnoses and treatments.

The **Authorization Form** you will sign on your pet's surgery date at our office will include pre-anesthetic blood work and electrocardiogram screening for pets over 7 years of age.

1. The Complete Blood Count (CBC) and Chemistry Profile which includes:

- **CBC:** PCV (Anemia), White Blood Cell Count (Infection) & Red Blood Cell Count (Anemia/Bleeding Disorder), Platelet Count (Clotting Disorder)
- **Chemistry Profile:** BUN and Creatinine (Kidney), ALKP and ALT (Liver), Glucose (Sugar), Total Protein (Dehydration), and Electrolytes (Imbalance).

2. Pre-anesthetic Electrocardiogram (ECG) Screening (for pets 7 years of age):

- Arrhythmias are more common than you may realize. And they can be difficult to identify. Preanesthetic screening provides the opportunity for a board certified cardiologist to interpret ECGs prior to their scheduled procedure, which can be lifesaving for veterinary patients.

We realize surgery and anesthesia are scary for both the owner and patient and we attempt to make surgery day as safe and comfortable for all involved. The physical examination and blood work done prior to any surgical procedure allows us to best minimize anesthetic and surgical risks and maximize patient safety.

If you have any questions or hesitations about the scheduled procedure, please do not hesitate to call us to discuss any aspect of the upcoming procedure.

SURGICAL INFORMATION FORM

PLEASE READ CAREFULLY

Anesthetic Procedures & Risks

We use a combination of pre-anesthetic medications/injectable and/or inhalant anesthetics to achieve optimum levels of anesthesia that are safe for your pet.

For short procedures, an injectable anesthetic is given alone that produces a good plane of surgical anesthesia with a quick recovery.

For most procedures, your pet is anesthetized and then intubated (insertion of a tube into the trachea or wind pipe). This will ensure that your pet is able to receive oxygen at all times and prevents aspiration of any fluids into the lungs. Anesthesia is maintained with a gas anesthetic, Isoflurane, which is very safe and is not metabolized by the body. This allows us to have more control over anesthetic depth and it is less irritating to the airways.

For procedures that require minimum sedation, an injectable anesthetic is given that produces a good plane of sedation with quick recovery.

Monitoring & Pain Management-Monitoring of patients during anesthesia is done in two ways. First, a veterinary nurse is with your pet continuously from beginning of anesthesia to recovery. Second, we have a computerized monitor that records heart rate, pulse rate, oxygen levels, respiration, ECG, core and rectal temperature.

Our clinic strongly believes in compassionate, quality, medical care for our patients. As a result, all surgery patients will receive pain management before, during and after surgery. Additionally, pain medication will be prescribed home. Additional information will be given at discharge.

Intravenous Catheterization & Fluids

We require the placement of an IV catheter and use of IV fluids during all anesthetic procedures. This allows us to have quick, available access to the circulatory system (blood) in case of an unforeseen emergency. The fluids help provide support to the circulatory system and prevent dehydration, as well as aid in a quicker recovery from anesthesia.

It is important for you to understand that there is always a risk of anesthetic and surgical complications anytime a procedure is performed. We strive to take the highest quality care of your pet and take all the added precautions you allow to avoid potential problems. Thank you for entrusting your pet to us.
